

Gira G1 (2nd gen.) – Release Notes

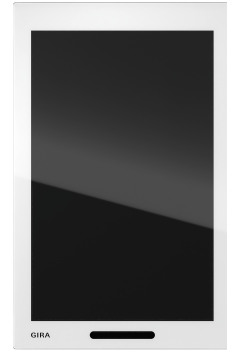

Item no.: 2066 .., 2087 ..

Firmware version: 1.2.18

Date: 24/09/2026

Gira Project Assistant (GPA) version: 6.1 or newer

We recommend that you always use the latest available GPA version.

1. New functions

The new functions can only be used with server version 4.0 or later.

Gira X1 Client

- List view is available in the Gira G1 (2nd gen.).
- New visualisation templates:
 - Weather and climate information
 - Multi-status display
 - Threshold transmitter
 - Heating and cooling with relative set temperature setting
- Extension of the symbol library by 400 additional symbols
- Update of existing visualisation templates:
 - Extended status information can be displayed for switch, button, shutter and blind functions.

Gira One Client

- List view is available in the Gira G1 (2nd gen.).
- New visualisation templates:
 - Weather and climate information
 - Automated sun protection
 - Day-night switchover
- Extension of the symbol library by 400 additional symbols

2. Bug fixes performed

Gira X1 Client

- When used as a room operating device, the Gira G1 also displays the room itself when the starting room is selected.
- Changing the profile will result in the loss of the configured starting room.
- The set temperature is adjusted by swiping in the temperature template.
- After a restart, the display backlight sometimes remains on.
- When the device wakes up, only the backlight is activated.

Gira HomeServer Client

The device only displays a white screen during operation.

3. Known limitations

- DCS IP gateway:
No automatic reconnection if the IP address is changed, even when auto-discovery is active
- Delayed restart:
This can occur if the restart takes place shortly after a door call via the DCS IP gateway
- Gira X1 Client:
To use the functions newly added to the GPA for presence simulation, the Gira G1 must first be restarted
